---

## PROFESSIONAL SUMMARY

Software Engineering student with hands-on experience in Java, C, HTML, CSS, JavaScript, and SQL. Focused on writing maintainable, well-structured code and translating that into interfaces that are both functional and refined — from full application architecture down to interaction detail. Builder of a complete Healthcare Management System covering patient records, doctor scheduling, and appointment booking.

---

## EDUCATION

### Daffodil International University

BSc in Software Engineering — Bangladesh

### Shimanta Adarsha College

Higher Secondary Certificate, Science Group — Satkhira, Khulna

### Satkhira Public School and College

Secondary School Certificate, Science Group — Satkhira, Khulna

---

## SKILLS

|                      |                                                           |
|----------------------|-----------------------------------------------------------|
| Frontend             | HTML5, CSS3, JavaScript, Bootstrap                        |
| Languages & Database | Java, C Programming, SQL                                  |
| Tools                | Git & GitHub                                              |
| Other                | UI/UX Design, Clear Communication                         |
| Spoken Languages     | Bengali (Native), English (Professional)                  |
| Interests            | Full-Stack Development, UI/UX Design, System Architecture |

---

## PROJECTS

### Healthcare Management System

HTML • CSS • JavaScript • SQL

Built a complete Healthcare Management System for hospital administration, covering patient records, doctor schedules, and appointment booking modules with conflict-safe scheduling logic.

### Weather App

HTML • CSS • JavaScript • API

A clean weather lookup tool showing current conditions and forecasts, built with a weather API and vanilla JavaScript.

### Number Guessing Game

HTML • CSS • JavaScript

A browser-based game where the player guesses a randomly generated number, with live feedback and a move counter.

### Calculator

HTML • CSS • JavaScript

A responsive calculator with keyboard support and clean button-press animations, built entirely in vanilla JavaScript.

### Portfolio Website

HTML • CSS • JavaScript

A fully responsive personal portfolio built from scratch with semantic HTML, custom CSS, and vanilla JavaScript, featuring dark/light mode, live GitHub stats, and interactive case studies.

---

## STRENGTHS

- **Clean, Maintainable Code** — readable, consistent, easy to extend
- **Continuous Learning** — formal coursework paired with independent study
- **System-Level Thinking** — database schema through interface design
- **Clear Communication** — visible progress, early questions, steady alignment
